

Ejercicio:
De dos números determinar cual es el mayor

The screenshot shows the Dev-C++ IDE with a C++ program open. The program prompts the user to enter two numbers and then outputs the maximum of the two. The execution window shows the program running successfully with the input values 2 and 20, resulting in the output 'El numero mayor es: 20'.

```
#include <iostream>
using namespace std;

// dos numeros enteros cual el mayor

int num1, num2, result;

int main(){
    cout<<"Ingresa el primer numero \n";
    cin>>num1;
    cout<<"Ingresa el segundo numero \n";
    cin>>num2;

    if ( num1 > num2) {
        cout<<"El numero mayor es: "<<num1;
    }
    else {
        cout<<"El numero mayor es: "<<num2;
    }

    return 0;
}
```

Execution Output:

```
C:\Users\Angel\OneDrive\Esc
Ingresa el primer numero
2
Ingresa el segundo numero
20
El numero mayor es:
20
